

```
#include <stdio.h>
#include <stdlib.h>
#include <unistd.h>
int main()
{
    int a;
    a = fork();
    if (a < 0)
    {
        printf("child process could not be created");
        exit(-1);
    }
    else if (a == 0)
    {
        execl("/bin/ls", "ls", NULL);
    }
    else
    {
        printf("Parent process : My ID is %d\n", getpid());
    }
    return 0;
}
```

```
sahaj2350@sahaj2350-VirtualBox: $ gcc diffProgQue3.c
sahaj2350@sahaj2350-VirtualBox: $ ./a.out
Parent process : My ID is 6001
```
